

Appl. No.: 10/619,535  
Amdt. dated 18 JAN 2006  
Reply to Office Action of 11 Jan 2006

**I. AMENDMENTS TO THE CLAIMS:**

The following listing of claims will replace all prior versions and listings of claims in the application:

**Listing of Claims:**

- 1-5. (Cancelled)
6. (Currently Amended) A connector comprising:  
a first connector head having an axis;  
a second connector head; and  
a connection mechanism coupling the first connector head and the second connector head,  
wherein the connection mechanism is adapted to limit the motion of the second  
connector head in a first plane substantially coincident with the axis and in a  
second plane substantially orthogonal to the axis; and  
a third connector head coupled to the connection mechanism, the connection mechanism  
adapted to limit motion of the third connector head to the first and second planes,  
wherein the second and third connector heads are adapted to move independent of each  
other.
- 7-43. (Cancelled)
44. (Previously Presented) The connector of claim 6, wherein the connection mechanism is  
further adapted to retain the second connector head in a specified position in the first plane and  
further adapted to retain the second connector head in another specified position in the second  
plane.

Appl. No.: 10/619,535  
Amdt. dated 18 JAN 2006  
Reply to Office Action of 11 Jan 2006

45. (Previously Presented) The connector of claim 44, wherein the connection mechanism is further adapted to retain the third connector head in a specified position in the first plane and further adapted to retain the third connector head in another specified position in the second plane.

46. (Previously Presented) The connector of claim 6, wherein at least one of the connector heads comprises a device slot selected from the group consisting of Universal Serial Bus, FireWire, Bluetooth, video, RS232 and memory device slots.

47. (Previously Presented) The connector of claim 6, wherein at least one of the connector heads comprises an electronic device selected from the group consisting of Universal Serial Bus, FireWire, Bluetooth, video, RS232 and memory devices.

48. (Previously Presented) The connector of claim 6, wherein at least one of the connector heads comprises a cable.

49. (Previously Presented) The connector of claim 6, wherein the first connector head is fixedly coupled to an electronic device selected from the group consisting of personal digital assistant, telephone, camera and personal computer electronic devices.

50. (Previously Presented) The connector of claim 6, wherein the first connector head comprises a different connector head style from at least one of the second and third connector heads.

51. (Previously Presented) The connector head of claim 6, wherein the connection mechanism is further adapted to comprise means for implementing a hub function between the first connector head and the second and third connector heads.
